Finally—a way to STOP
NETWORK VIRUSES and WORMS.

REGISTER NOW!

WWW.URL GOES HERE

[YOUR FIRM NAME] and Trend Micro are pleased to invite you to a FREE seminar designed to educate you on the nature of the network worm, to help you understand why current measures have been ineffective, and introduce a new solution that was designed specifically to protect high risk networks subsegments from these network viruses and worms.

- **Observe** an actual virus attack infect a network, and how the right response can isolate it and remove it from the network
- **Discover** how to identify high risk users as they connect to your network before they can introduce a threat—and automatically implement corrective measures
- **See** how periodic network analysis information can be effectively leveraged to correct security risks before the next network worm is released “in-the-wild”
- **Learn** how network segmentation can be leveraged for a powerful early response to new threats
- **Watch** policy enforcement provide security, while still facilitating “business as usual” with minimal IT intervention

Where: XXX

When: YYY

Register today!! Seating is limited.

Attendees will receive access to the materials presented, and also be entered to a drawing for a FREE [Gift goes here]!

Advance registration is required at
[www.urlgoeshere.com]

We look forward to seeing you at the event!
